

# Geoglas

## Asphalt Reinforcement System

**Geoglas asphalt reinforcement has been specifically designed to prevent pavement failure. When installed within the asphalt pavement it works by reinforcing and strengthening the layers, increasing the interlayer bond and sealing the pavement.**

A glass fibre bonded to a non woven geotextile, Geoglas is a key component in road construction and maintenance.

### Main benefits of Geoglas:

- Extends pavement life
- Reduces rutting
- Reduces traffic induced reflective cracking
- Reduces fatigue cracking
- Seals the pavement
- Reduces maintenance and life cycle costs
- Available ex stock in 50/50 kN/m and 100/100 kN/m tensile strengths
