15 years experience in the industry gives Geosynthetics the distinct edge in its ability to source the best quality products at competitive rates.

**Rhyno® GW8143 Woven Polypropylene Geotextiles was used beneath Tenax HM3L for the initial stages of this Solar Farm access road.**

Rhyno® Woven Geotextile was chosen for its strength and durability because the initial stages of the access road were going to be subject to heavy traffic. For this stage 6F5 stone was consolidated in layers directly on top of it.

We offer a full range of Rhyno® Woven Polypropylene Geotextiles for whatever separation application you may have. Please ring our technical sales department on **01455 617139** for guidance.
