

Enhanced parking surface for redevelopment of: **SWANWICK MARINA**

Contractor: AJR Civil and Marine Ltd
Sector: Sport, Leisure & Equestrian

Location: Swanwick Marina, Swanwick Shore Road, Southampton, SO31 1FA

Project Overview

Swanwick Marina, situated on the River Hamble, has a rich history. In the 19th century the boatyard was a significant centre for boat building, notably constructing yachts from the 1930s and undertaking war work for the Admiralty during WWII.

Today, the marina is a leading facility, having hosted the British Motor Yacht Show since 2014. The site has undergone substantial upgrades to transform the site into one of the UK's premier marinas. A major phase of regeneration started in 2014, coinciding with the marina securing the British Motor Yacht Show.

The Challenge

The redevelopment focused on significantly improving infrastructure, pontoons, access, facilities, and safety, reflecting Premier Marinas' long-term commitment to high operational standards and a premium customer experience.

To meet these enhanced requirements, TTE™ permeable paving was selected as the preferred surfacing solution.

The system's combination of strength, permeability, sustainability, and visual quality aligned with Premier Marinas' objectives for:

- **Safety** – providing a stable, non-slip, and load-bearing surface suitable for heavy marina traffic.
- **Quality** – durable construction materials offering a long service life with minimal maintenance.
- **Aesthetics** – an attractive, uniform finish that complements the modern marina environment and visitor experience.
