Golpla™ Pre-Grown Maintenance Guidance

The Golpla™ Recycled Plastic Units are designed to be maintenance free; however, when filled with grass, we recommend that the following checks are carried out periodically to ensure the surface remains safe and its appearance is maintained.

If any issues arise with the Golpla™ product that are not covered below, please contact the Geosynthetics Ltd office for advice, or to arrange a site meeting.

Maintenance Guidance

- Cut the grass as required during the growing season. Set mower blades above their lowest setting to avoid the risk of damaging the Golpla™ units. Remove grass cuttings after mowing to prevent compaction of the surface.
- Water during periods of drought, or as required, to maintain healthy grass growth.
- Apply fertiliser in the spring and autumn to maintain healthy grass growth, and at other times as required.
- Do not use road salt on the surface during winter months.
- Any bare or worn patches can be re-sown with grass seed and covered with a top dressing.

Golpla™ Pre Grown grass comprises of:

- 35% Creeping Red Fescue.
- 20% Perennial Ryegrass (made up of Venice & Melbourne Ryegrass).
- 20% Smooth Stalked Meadow Grass.
- 20% Chewings Fescue.
- 5% Alison Perennial Ryegrass.
